FOAMEX ASIA WCC

EXECUTIVE SUMMARY

WHY CONSIDER USING FOAMEX ASIA CLEANING TECHNIQUE?

REDUCE SODIUM & METAL CONTAMINANTS

ELIMINATE HAZARDOUS CHEMICALS, SUCH AS H₂O₂

BEFORE

AFTER

REDUCTION OF WASTE

**REDUCE DOWNTIME
REMOVE MORE PARTICLES FROM CHAMBER**

International prices may vary due to Import Duties, taxes and transportation.

Foamex Asia Cleaning Technique

Foamex Asia, WCC has developed a cleaning technique that allows Semiconductor tool owners the ability to effectively clean their tool's critical surfaces without the use of ScotchBrite or hazardous solvents (i.e. Hydrogen Peroxide). The Foamex Asia Cleaning Technique targets the areas in toolsets (Implant, ETCH, CVD, HDP, TxZ, etc.) where it is critical to remove deposition in a timely manner.

Our proven method of cleaning has provided our customers with a substantial increase in tool efficiency by reducing PM green-to-green time, reducing defects, reducing PM recovery times and improving tool performance.

UltraSOLV® ScrubPADs and ScrubDISKS® are patented scrubbing tools for use in PM procedures on process equipment in semiconductor, flat panel display, optical component and hard disk drive industries. The availability of various sized diamond, silicon carbide and aluminum oxide abrasives allow for safe and efficient scrubbing of the most difficult to clean process chambers. UltraSOLV® ScrubPADs and ScrubDISK®s, used in conjunction with UltraSOLV® Sponges, Wipers, and Swabs, reduce cleaning times, pump down times and contamination levels for critical process tools.

**ELIMINATE HAZARDOUS
CHEMICALS, SUCH AS H₂O₂**

Foamex Asia Cleaning Technique

Foamex Asia, WCC has developed a cleaning technique that allows Semiconductor tool owners the ability to effectively clean their tool's critical surfaces without the use of ScotchBrite or hazardous solvents (i.e. Hydrogen Peroxide). The Foamex Asia Cleaning Technique targets the areas in toolsets (Implant, ETCH, CVD, HDP, TxZ, etc.) where it is critical to remove deposition in a timely manner.

Our proven method of cleaning has provided our customers with a substantial increase in tool efficiency by reducing PM green-to-green time, reducing defects, reducing PM recovery times and improving tool performance.

UltraSOLV® is a highly absorbent, Class 10 Sponge constructed from a naturally reticulated, hydrophilic, polyurethane foam. Using Foamex Asia's patented cleaning process and foam technology, UltraSOLV® Sponges are ideal for cleaning critical tools and assemblies. Available as a sponge for use with UltraSOLV® ScrubPADs on wet cleans.

Wipers

Foamex Asia Cleaning Technique

**REDUCE DOWNTIME
REMOVE MORE PARTICLES
FROM CHAMBER**

MiraWIPE® is constructed from a continuous filament micro denier polyester, super soft textile resulting in enhanced absorbency and contamination pickup versus traditional polyester wipers. Woven from a no-run, no-stretch textile to minimize In-Use Particles from the face and edge of the wiper. Cleanroom washed and packed, MiraWIPE® is available in configurations to meet Class 1-1000 applications.

ScrubCLEAN® is a specially designed abrasive sponge for cleaning hardened residues off scratch sensitive tools and components such as CMP polishers, shower heads, heater surfaces, metal/polyester mesh masks, sealing surfaces, plastic and glass surfaces. Unlike current scrubbers which rely on coated fibers or coated abrasives, ScrubCLEAN® abrasive sponges are constructed from plastic particles that are adhered to the sponge with a polyurethane polymer, making them ideal for applications where it is critical to reduce particles and fibers generated by the abrasive surfaces.

Swabs

1000 Series Swabs employ the CleanWIPE™ reticulated 100ppi foam to provide soft, absorbent cleaning performance. The CleanWIPE™ swabs are available in a variety of head shapes and sizes enabling precision cleaning of optical, disk drive, and medical device components. Manufacturing, cleaning and packaging is performed on an integrated line to ensure maximum cleanliness and lot to lot uniformity.

MiraSWAB™ 1500 and 1600 Series Swabs feature a patent-pending micro fiber fabric over foam tip bonded to a polypropylene shaft resulting in a swab that is soft, conformable to work surface yet both resistant to abrasion and solvents. MiraSWABS™ for the first time offer the cleaning performance of micro fiber fabrics with the scratch free properties of foam for Optics, HDD, Semiconductor and Biomedical applications.

The MiraSWAB™ 1600 Series employs a static dissipative handle for ESD sensitive applications. **1600 Series** will be introduced soon.

UltraSOLV® 1700 Series Swabs are excellent general purpose cleaning tools for HDD components, optics, medical devices or vacuum equipment. UltraSOLV® tip construction provides good particle and residue removal with a minimum of particle transfer due to abrasion. Unique thermal bonding and cleaning process ensure a minimum of particle shedding from foam seal.

ESD Safe UltraSOLV® 1900 Series Swabs provide streak-free cleaning of static sensitive components. Excellent absorbency maximizes particle and residue removal from components. The UltraSOLV® foam tip offers excellent abrasion resistance, minimizing particle generation due to abrasion when cleaning sharp or rough surfaces such as suspensions, flex circuit bonding pads and sliders. UltraSOLV® foam generates < 5 volts of tribo charge on commonly used HDD Slider surfaces.

Wipers

CleanWIPE® is constructed from an open-cell, ester-based polyurethane medical grade foam. Originally developed and adopted by NASA and the medical device industry, it is 100% fiber-free and will not interfere with the curing of elastomers and adhesives used in Aerospace and medical applications. CleanWIPE® is laundered with a proprietary process yielding a Class 100 wiper that meets rigorous cytotoxicity testing for FDA regulated facilities. Widely used to clean metal masks used to print thick film resistors and hybrid circuits. Due to its ability to conform to metal mask surfaces, CleanWIPE® enables excess paste to be thoroughly removed while minimizing abrasion damage to the emulsion.

Wipers

PilloWIPE™ is constructed from polyester and micro-fiber based, clean room-grade cloths and reticulated, clean room-grade foams. The foam sponge is sandwiched between two layers of the fabric to form a unique cleaning tool. PilloWIPE™ is designed to enhance the cleaning of difficult to clean surfaces such as tools with sharp edges or high temperatures. PilloWIPE™ is designed for use in clean room facilities. Available with an abrasive mesh surface for scrubbing applications. Autoclave compatible for use in sterile areas.

FirmWIPE™ is constructed from an open-cell polyurethane foam which has undergone a special felting process. FirmWIPE™ offers fiber-free wiping in applications where durability and fast wicking, without dripping, are desirable. FirmWIPE™ enables excess paste to be thoroughly removed while minimizing abrasion to the emulsion. Its unique pore structure makes it ideal for cleaning metal masks used to print LTCC components, capacitors, EL, OLED, and Plasma Display Panels.

Wipers

UltraSORB® is a highly absorbent wiper that combines excellent ESD characteristics with Class 100 cleanliness. Due to its sponge-like wiping capability, fiber-free construction and ability to resist shedding of particles due to abrasion, it is the perfect choice for Stencil, Thick Film Screen and Medical Device wiping applications. Its unique pore structure allows for controlled solvent transfer to screen and metal masks to aid in the removal of solder paste, conductive adhesives and thick film inks. Ideal for cleaning metal masks used to print LTCC components, capacitors, EL, and Plasma Display Panels. Due to its ability to conform to metal meshed masks, UltraSORB® enables excess paste to be thoroughly removed while minimizing abrasion to the emulsion.

HT4734

HT4754

UltraSOLV® is a highly absorbent, Class 10 Wiper constructed from a naturally reticulated, hydrophilic, polyurethane foam. Using Foamex Asia's patented cleaning process and foam technology, UltraSOLV® Wipers are ideal for cleaning critical tools and assemblies. Available as a sponge for use with UltraSOLV® ScrubPADs on wet cleans.

- The unique abrasion resistance and conformable characteristics of UltraSOLV® allow it to clean rough, coarse and bead blasted surfaces that will snag traditional polyester wipers.
- Low levels of particle generation, ionics, organics, lot-to-lot consistency and fiber free construction combined with unsurpassed contamination removal properties make it the ideal tool for the cleaning of critical process equipment.
- Sponge-like absorbency and rinsing characteristics offer the opportunity to significantly reduce wiper usage and hazardous waste generation in equipment PM's.
- Excellent static dissipative and tribo charging properties allow for safe cleaning of static sensitive assemblies, such as wafer transfer chambers in vacuum tools.

Face/Beard Masks

Foamex Asia 4400 Series, Fiber-Free Face Masks provide continuous particle/moisture control and cool, flexible comfort without the speech constraints, goggle/glasses steaming or moisture build-up on the face typical of paper and dense cloth masks. Foamex Asia Face Masks are used as comfortable under-masks for hoods with built-in biological masking. They protect the wearer from contact and provide a fresh, clean barrier to the laundered mask in the hood.

Snag-resistant fabric prevents abrasion damage.

Available in 3 sizes

UltraMOP™ III is constructed of a snag-resistant, polyester fabric laminated to absorbent, polyurethane foam. The fabric layer wraps over both the leading and trailing edges improving cleanliness and durability. The exclusive wrap around design enables this mop head to be used to clean and apply disinfectant to walls, ceilings as well as floors. Compatible with gamma, autoclave and ETO sterilization methods.

Chamber Cleaning Tools

ErgoWRENCH™

A unique tool used for safer and more efficient scrubbing of hard to reach areas throughout vacuum chambers. The soft ergonomic grip provides ease of use, while stiff Swivel Head can be adjusted to optimize scrubbing angles. Different size Heads and Handles are interchangeable, which allows the ErgoWRENCH™ to be adjusted for different applications.
